On 1994, in [7], N. Papaghiuc introduced the notion of semi-slant submanifolds in a Hermitian manifold which is a generalization of CR - and slant-submanifolds ([1],[3],[4]). In particular, he considered this submanifold in Kaehlerian manifolds ([7]). Then, on 2007, V. A. Khan and M. A. Khan considered this submanifold in a nearly Kaehler manifold and obtained interesting results ([5]).

Recently, we considered semi-slant submanifolds in a locally conformal Kaehler manifold. We gave a necessary and sufficient conditions the two distributions (holomorphic and slant) be integrable. Moreover, we considered these submanifolds in a locally conformal Kaehler space form ([6]).

In this talk, we define 2-type warped product semi-slant submanifolds in an locally conformal Kaehler manifold which are the generalization of warped product CR -submanifolds ([2]) and consider some properties of these submanifolds. In particular, we mainly consider the first type warped product semi-slant submanifolds in an l.c.K.-space form.
